World Cup

World cup groups and matches

Changelog (show)

Input

The following input parameters exist:

Simple	Detailed
--------	----------

Only available inputs in this file version are shown.

required file = worldcup

optional version = 1.1

optional actionType = viewMatches {default}

Indicates what type of action the page should perform.

viewMatches {default}

View a list of the matches of a particular group.

optional matchRound : unsigned Integer {Default: last initialized round of the chosen cup}

A key that indicates a certain round (which typically runs for either 10 weeks or 9 days). Qualification are always matchRound 1. You will retrieve a list of all available matchRounds for a certain cup in the output. Will default to the last initialized round of the chosen cup, if not supplied.

required cupSeriesUnitID : unsigned Integer

The globally unique identifier of the CupSeriesUnit (a 'group' of 4-6 teams).

viewGroups

View a list of the groups (with points, place etc) of a particular round, season and cup.

optional cupID : WorldCupID {Default: 137 (World Cup)}

The globally unique cupID. Will default to 137 if not supplied.

required season : unsigned Integer

The starting season of the cup. For instance, World Cup V which started with qualifications 2004-03-19, started global season 22, so the season of World Cup V is 22, even while it will continue onto global season 23.

Output

Here you can see the output, based on the values of the input parameters and selected action type.

Simple	Detailed	XML	Example
--------	----------	-----	---------

All containers/elements for the selected version and action type are shown.

```
<?xml version="1.0" encoding="utf-8"?>
<HattrickData>
  <Matches>
    <Match>
      <MatchID> : unsigned Integer
        The globally unique matchID.
      </MatchID>
      <HomeTeam>
        <TeamID> : unsigned Integer
          The globally unique home team nationalTeamID.
        </TeamID>
        <TeamName> : String
          The home team name.
        </TeamName>
      </HomeTeam>
      <AwayTeam>
        <TeamID> : unsigned Integer
          The globally unique away team nationalTeamID.
        </TeamID>
        <TeamName> : String
          The away team name.
```

```

| </TeamName>
</AwayTeam>
<MatchDate> : DateTime
    The starting date of the match.
</MatchDate>
